

HYDRA·LIGHT™

# HydraLight uses the latest **FUEL CELL** technology. **RUNS ON ANY WATER!**

**CAN RUN FOR DAYS ON ONE WATER DIP!  
WHEN WATER DRIES OUT, RE-DIP FOR MORE LIGHT.**

## 4 EASY STEPS

1

**Twist off bottom and remove fuel cell from HydraLight**

2

**Remove plastic wrap from fuel cell & Immerse in water 10-12 seconds to generate power**

3

**Vigorously shake out excess water**

4

**Insert fuel cell back into HydraLight with fuel cell facing forward and turn on**

### FEATURES & BENEFITS

- Runs on ANY kind of water
- No batteries needed\*
- 2 in 1 flashlight and lantern
- New H2O Fuel-Cell technology
- Can run for DAYS on one water dip
- Simply re-dip in ANY water for more light
- Fuel Cell can provide up to 300 HOURS of light
- Rugged, durable and made to last!
- 25 YEAR shelf life\*\*

### PERFECT FOR ALL LIFE'S NEEDS...

- Backpacking
- Camping
- Hunting
- Power outages
- Boating
- All emergencies
- Storage
- Every day use
- And many more...

### GENERAL OPERATING INSTRUCTIONS

For **FLASHLIGHT** mode... Push button to turn on/off.  
For **LANTERN** mode... Slide top up and push button to turn on/off.  
To conserve HydraLight fuel cell energy, keep light off when not in use.

### WARNING

1. This product is not a toy. Keep out of reach of children.
2. Do not expose the HydraLight to direct flame.
3. Use only as directed.

#### Disclaimers:

\* Refers to TRADITIONAL BATTERIES, typically used in flashlights, which make electricity from energy stored EXCLUSIVELY INSIDE the batteries. The HydraLight uses a Fuel Cell which is not considered a TRADITIONAL BATTERY as it requires EXTERNAL elements, such as water, to make electricity.

\* 25 year shelf life when not in use. A new, unused HydraLight will store for 25 years in a dry non-extreme environment.

\* HydraLight is a registered trademark of HydraLight International, and is marketed by Infomercials, Inc. HydraLight "HydraCell" Fuel Cell has been tested to run for days on a single water dip, at room temperature. Fuel Cell can provide up to 300 hours light, over multiple water dips, before the life of the Fuel Cell is exhausted. Slight expansion of the Fuel Cell at the end of its life is normal. Fuel Cell does not derive energy directly from water. Water is a catalyst which enables the process of transferring electrons from the anode to the cathode to create power. Fuel Cell needs water to run. Without water, Fuel Cell will not run. When water dries out, Fuel Cell may be re-dipped in any water to generate more power. Fuel Cell may be re-dipped multiple times before life of the Fuel Cell is exhausted. After Fuel Cell has been exhausted, it may be discarded, and replaced with a new Fuel Cell for continued use of your HydraLight Flashlight/Lantern.

ANY WHITE RESIDUE IS A SAFE BLEND OF SALT AND OTHER HARMLESS BYPRODUCTS. THERE IS NO HARMFUL ACID IN THIS PRODUCT!
